Solar Cooking – Progress in Haiti

United Nations High Level Political Forum
July 2023

David Stillman, PhD
Executive Director, PPAF
www.ppafoundation.org
Young people in Haiti are learning to use the sun to cook, rather than charcoal or wood.

This helps avoid money, health & environmental costs – a burden on families & country.
Woodfire versus solar for cooking
• Leader & core group of a nonprofit in a training session from a PPAF colleague.
• Now they are building skills & reporting progress before expanding their reach.
• Another nonprofit team learning about solar cooking from a PPAF colleague.
• Young professionals & students formed the organization to help boost development.
• PPAF supports weekend solar cooking classes in a center for children from low-income families.

• The teachers are themselves former students.
A collaborator has donated sets of solar cookers to several orphanages.

PPAF supports demonstrations, training & monitoring by a local colleague.
• Solar cooking can put food on the table.
• Cooks & kids declare this a winner!
• The innovation is proving its worth.
Solar cook & solar cookers - These three pages
