History

Date of creation: 2007

Status: Individual Company

We create handmade jewelry in silver and gold crimped only with natural stones of Madagascar.

Our raw material is extracted by craftsmen who go under the river into the forest to find pure gold which is taken by collectors who finally provide the material to us.

We work with several lapidaireries and craftsmen, which provide us quality stones especially extracted in quarries in the hills, forests, in very remote areas of the city where they go on foot for four days or more depending on where they can find the stone.

Jewels and Precious Stones has participated in trade fairs in Europe: Milan, Nice, Montpellier.

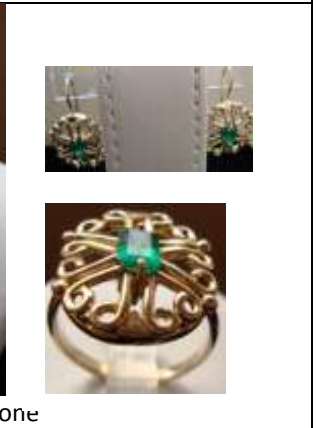

We would like to see other countries like the United States to make known our products and expand our range of customers (retailers and boutiques: "niche")
